## A NEW SAFETY STANDARD ESTABLISHED

Nations pay a staggering price for slip/fall accidents. A one-hundred billion dollar a year problem identified as "The number one cause of non-vehicular accidental death". An 80 to 90%, as confirmed by pHluorus Workers' Comp Insurance surveys, reduction in cost and deaths is possible. One

hundred and sixty million people in the United States alone are permanently disabled every year! Major causes of slip/fall accidents are; slippery cleaners, improper cleaning procedures, micro-organisms and poor traction built-in to the original surface. You can permanently micro-etch the surface and instantly dissolve deposits and micro-organisms nurtured by most cleaners. pHluorus guarantees ADA compliant pedestrian surfaces as a daily event.

PLEASE REMEMBER

## THE SAMPLE

The sample of pHluorus is provided to enable you to prove for your self that indeed the claims of exceeding the daily ADA guideline of a .70 Coefficient of friction is possible.

### ALL YOU ADD IS WATER

**TILE;** for unglazed, one part pHluorus to four parts water, example is commercial kitchen quarry tile. For glazed tile, one part pHluorus to eight parts water, example is decorative tile.

**TUBS;** for all tub applications except fiberglass, a dilution of one part pHluorus to one part water is recommended.

**CEMENT;** for greasy garage or auto service areas use full strength. For sidewalk areas including steps, one part pHluorus to two parts water.

### AFTER FIRST TREATMENT

The initial treatment you have applied must be protected with the *pHluorus cleaner*. Simply follow the dilution ratios indicated on the container. **TUB CLEAN** is a ready mix and should not be diluted. Cleaning with pHluorus will block micro-organisms growth and provide a glove like veneer of fluoride. **Caution;** if you return to your old cleaner the biological/physical safety treatment will be significantly reversed and will void all legally protective affidavits/warranties.

## APPLICATION

To apply pHluorus on-going please read the label attached to the container. **SAMPLE DIRECTIONS;** add water as described in the panel to the left and pour directly on the floor/tub you have selected. Brush briskly with a small hand brush and rinse with plenty of water. Dry with clean towel and allow to air dry. **TEST FOR SLIP-RESISTANCE** by applying water back on treated and untreated surfaces. Use bare hand for bare foot scenario. Follow safety cautions on sample bottle. **Before** 30 day invoice due,

## USE ON-GOING Phluorus FOR 30 DAYS WITH THIS

## GUARANTEE

**WE THE MANUFACTURES OF PHLUORUS GUARANTEE THAT FOLLOWING INITIAL TREATMENT, HAVING BEEN APPLIED ACCORDING TO OUR DIRECTIONS AND MAINTAINED WITH PHLUORUS CLEANER, YOUR FLOOR WILL CONTINUE TO BE SLIP-RESISTANT FOR THE LIFE-TIME OF THE FLOOR. SHOULD A CLAIM ARISE WE WILL PROVIDE AN AFFIDAVIT AS SUPPORTIVE EVIDENCE THAT THE FLOOR WAS SLIP-RESISTANT AND TESTIFY TO SAME AS AN EXPERT WITNESS.**

## CONFIDENTIAL SURVEY

After you have tested the sample please check in the spaces below your opinion as to;

High increase/slip-resistance?

- yes  
 some what  
 no

High increase/appearance?

- yes  
 yes, but need to finish  
 no

A desire to keep the slip-resistance working?

- yes  
 Depending on the process  
 no

An interested in pHluorus as?

- End user  
 Distributor or Manf. Rep.  
 No interest
